

## Export from Byte Classic

Creating a Fannie Mae version 3 file from your Byte file

1. Open the Byte loan file from which you want to create the fnm file.
2. Go to the Main Menu, click Communications on the left side, double click on lenders.
3. Double click Export Fannie Mae File.
4. An Export Fannie Mae file popup screen will appear. Enter the appropriate selections from the dropdown list. You can click the Validate button to check for errors, click close and fix errors to edit the file quickly. Click Next.
5. Repeat step 4 until all errors have been corrected.
6. Click Create File. A popup window will alert you that the fnm file has been created successfully. Click OK.

Note: The file will be stored in the C: \TQS5\Temp folder, and it will have the Byte file name with an fnm extension. At this point, the fnm file is available for attaching to email, or importing to a lender's website.
